ABSTRACT

This application logically aggregates files based on their extension. It helps to store information regarding file organization within internal and external storage drives and six subfolders of C Drive (Desktop, Documents, Pictures, Videos, Downloads, Music). It reminds the user to backup important documents and photos.Movies and TV shows can be categorized into watched and unwatched so that users can delete watched ones to gain space. It gives user the option to rename vaguely named documents PDFs files. It monitors the system for any changes and then accordingly, updates the application dynamically. The application provides faster search options to the user where searching is substring based and case insensitive
